KEY CORRELATION INSIGHTS

- Longer-tenure customers are significantly less likely to churn.
- Higher monthly charges are associated with increased churn.
- Customers using Online Security and Tech Support churn less frequently.
- Customers with partners and dependents are generally more loyal.
- Retention programs should target new and high-charge customers.

KEY INSIGHTS (Monthly Charges & Internet Service)

- a.) Churn vs Monthly Charges: Customers who churned ("Yes") had significantly higher average monthly charges (\$74.44) compared to those who stayed ("No") at \$61.27. This suggests that higher pricing is correlated with higher churn, meaning customers paying more are more likely to leave.
- b.) Internet Service Churn Rate: This highlights that fiber optic customers are at the greatest risk of leaving, possibly due to higher costs, service issues, or competitive alternatives.
